

# IMPORTANT INSTRUCTIONS

Please read carefully before using product

**Congratulations** on getting your own *Mother's 3<sup>rd</sup> Arm™* "The Extra Hand Whenever You Need One!"

No more propping bottles on pillows or blankets, or helplessly seeing your toddler drop or throw their Sippy cup or cup. Those days are now over, as long as you remember your *Mother's 3<sup>rd</sup> Arm.™*

## Introducing Child To *Mother's 3<sup>rd</sup> Arm™*

It's important to first patiently introduce *Mother's 3<sup>rd</sup> Arm™* your child by letting them play with it then let them see it mounted by them with their bottle, Sippy cup or container. They may reject it at first, but as long as you keep their milk or other favorite beverage held in it, once they are hungry they will begin to use it and the rest will be history.

*Mother's 3<sup>rd</sup> Arm™* is a safe way for parents to feed their children when there are other pressing things, which are just as important, which need to get done. It is specially designed to attach on most surfaces that are either flat, round, square and even oblong, as long as the surface is not larger than 3 inches. It attaches to most strollers, car seats, booster seats, high chairs, regular chairs, tables or other surfaces. One must develop an eye for finding the right places to mount it. Once securely mounted, *Mother's 3<sup>rd</sup> Arm™* is used to firmly hold baby bottles, Sippy cups, food cups and drinking cups. It grows with your child. It then transitions to, or doubles as, a craft caddy, holder of paint, coloring pencils, bubble liquid, pacifier, toys and more. And if this was not enough Mom, or Dad, there may not be a more versatile cell phone holder in the car which you can adjust to the most comfortable position, a beverage holder as you drive or holder of other things that you need to keep within close reach. The possibilities are endless.

## SAFETY

- Follow Installation instructions on box and below carefully in order to properly mount *Mother's 3<sup>rd</sup> Arm.™*
- The *Mother's 3<sup>rd</sup> Arm™* does not contain lead, BPA, Phalates or other known harmful chemicals.
- The *Mother's 3<sup>rd</sup> Arm™* should be used with children who are able to push and pull holder – on average 6 months and older, but each parent or caretaker much determine whether child has the ability to move it or its head away on their own.

## WARNING

- Children should not be laid flat on back while feeding with or without the use of *Mother's 3<sup>rd</sup> Arm™* and should be inclined by 30% or more angle. This is so if too much fluid builds up in their throat, they gag or they choke, they will have a better chance to expel fluid out and not drown on/in fluid.
- Do not disassemble, misuse, modify or alter from its original construction, only remove holder to clean cover or to use other accessories **and follow instructions below for proper handling when positioning for use.**
- WARNING: Always remain in visual contact with the user and never leave the user unattended when using *Mother's 3<sup>rd</sup> Arm.™*

## QUICK INSTRUCTIONS – KEEP FOR FUTURE REFERENCE

### CLEANING

- *Mother's 3<sup>rd</sup> Arm™* is only cleaned by hand and IS NOT TO BE PLACED IN DISH WASHER OR WASHING MACHINE.
- To clean the cover, simply unscrew the bottle holder counter-clockwise (hold the arm with your left or right hand tightly, and with your other hand, turn the bottle holder in a left going circle) then pull off the cover and wash ONLY by hand with a mild baby shampoo or plain liquid.
- To clean the Arm and Clamp itself simply use a damp face towel and lightly put baby shampoo or milder soap on cloth with warm water and wipe it until any liquid, food or other substance is gone.
- **WARNING: DO NOT CLEAN WITH ALCOHOL OR OTHER TOXIC CLEANER IF BEING USED FOR CHILDREN**

**HOW TO BEST ATTACH MOTHER'S 3RD ARM™**

**Mounting Surfaces:**

*Mother's 3<sup>rd</sup> Arm™* Should always be mounted in a way so that the child's container can be positioned comfortably for feeding. There are many types of Strollers, car seats, booster seats, high chair and other things on the market. You may have a baby accessory with a flat, round or irregular, thin or thick shaped surface for attaching *Mother's 3<sup>rd</sup> Arm™*. Most have straightforward plain surfaces, others more creative surfaces. If you have plain surfaces to mount the *Mother's 3<sup>rd</sup> Arm™* on, it shall be simple. If you have a more creative surface, then you will also need to be creative. Here are some tips on how to best attach Mother's 3<sup>rd</sup> Arm to your baby accessory.

<b>Mounting Surface Type</b>	<b>How to attach <i>Mother's 3<sup>rd</sup> Arm</i></b>
	<p><b><u>Medium Non Slippery Round Surface:</u></b></p> <p>In case of a non-slippery surface, e.g wood surface. Turn the Clamp Screw counterclockwise until the mouth of Clamp opens enough to fit the round surface into the Clamp Mouth.</p> <p>Turn the Clamp Screw Clockwise to close its mouth tightly around the round surface. For best results, use a scrip of rubber around the round surface to reduce slipping.</p> <p>Example: Day time crib, bed or diaper change table.</p>
	<p><b><u>Flat Round Type Plastic or Metal Surface:</u></b></p> <p>Wrap the rubber strip around the flat round surface. The rubber strip made of "Grip it" material strengthens the attachment and makes the mounting surface non slippery.</p> <p>Turn the bottom knob Counter Clockwise to open the Clamp Mouth until the surface fits into mouth. Next, turn the Clamp Screw clockwise until its mouth tightly grips around the round surface. Test its firmness as you tighten the clamp down.</p> <p>Examples: High Chair, Stroller</p>
	<p><b><u>Thin Slippery Round Metal Surface:</u></b></p> <p>Wrap the rubber strip around the arm to thicken the mounting surface. The rubber strip made of "Grip it" material strengthens the attachment and makes the mounting surface non slippery.</p> <p>Turn the bottom knob Counter Clockwise to open the Clamp Mouth until the surface fits into mouth. Next, turn the Clamp Screw clockwise until its mouth tightly grips around the round surface. Test its firmness as you tighten the clamp down.</p> <p>Examples: High Chair, Stroller</p>

**Any Flat Surface:**

*Mother's 3<sup>rd</sup> Arm™* can be easily attached to any flat surface without the need of any other accessories. Simply open the Clamp Mouth by turning the Clamp Screw counterclockwise until the table surface fits into the mouth and touches the clamp body, then turn clockwise until it is firmly mounted. Always test the tightness of the clamp as you turn Clamp Screw. Make sure not to over tighten to avoid breaking the clamp.

**Attaching Mother's 3<sup>rd</sup> Arm to car seat**

**Infant Car Seat Attachment:**

Many car seats will have a clear place to clamp the *Mother's 3<sup>rd</sup> Arm™* others will not be so simple or clear. You must look for a place to mount towards the side of the seat (unless you have an armrest on the car seat itself as Minivans have) or the anywhere else it can mount. Initially you may have to try different mounting surfaces until you find the right one that both attaches firmly and places bottle holder in child's reach. If you do not see a clear simple surface then it would be time to get creative as follows:

*Mother's 3<sup>rd</sup> Arm™* can be attached directly to infant car seat in one of two more creative ways.

1. It can be attached directly to the car seat itself; or,
2. It can be attached to the base of the car seat.

**Step**

**Infant Car Seat Attachment**

**Step 1:**

Place the rubber strip to the arm of the infant car seat. (Your car seat may look different. Look for the best place to attach Clamp Mouth).

Since some infant car seats have thin sides, it may be best to place a rubber strip to thicken side and produce a workable mounting surface for the clamp to tighten down on.

1

Step

2

Step 2:  
 Turn the Clamp Screw counterclockwise until Clamp Mouth opens enough to fit the side and rubber into it then turn the Clamp Screw clockwise until it is tighten enough so the clamp does not move and is able to hold the bottle or Sippy cup. Attach *Mother's 3<sup>rd</sup> Arm™* to infant car seat arm along with the rubber strip as shown on the left. Turn the bottom knob Clockwise to Close the clamp.

Step

1

Step

2

**Infant Car Seat Base Attachment**

Step 1:  
 Place the rubber strip to the base of the infant car seat. (Your car seat base may look different. Look for the best place to attach *Mother's 3<sup>rd</sup> Arm™*)  
 Since the sides of most infant car seat base is hollow, it is best to place this rubber strip to give you a better platform to mount *Mother's 3<sup>rd</sup> Arm.™*

Step 2:  
 Turn the bottom knob counterclockwise to open the Clamp Mouth until it can fit the base into its mouth. Then fit the Clamp Mouth around the base and tighten Clamp Screw until you have secured a firm hold.

**Toddler / Child Seat Attachment:**

Many toddler seats will have surfaces that you can readily see where to mount clamp. Others will require you to be creative. If you have one that requires more attention, be prepared to try it in different ways until you finally get the right position that your child loves.

**Toddler / Child Seat Attachment: OPTION 1**

The Clamp Mouth can be attached to the side indentation of the toddler seat without requiring anything else. Just open Clamp Mouth enough to fit it firmly onto the side then tighten until clamp is firmly mounted.

Step

**Toddler / Child Seat Attachment: OPTION 2**

Step 1:

Place the rubber strip around the side of the toddler car seat arm area (Your toddler seat may look different. Find the best place to attach clamp).

Most toddler seats are covered with fabric. It is best to place a rubber strip around side in order to ensure a solid mounting surface for the clamp.

Step

Step 2:

Turn the bottom knob counterclockwise to open clamp mouth until side fits into it then tighten by turning the opposite way until clamp is firm enough to not slip off and it can hold bottle or Sippy cup.

**Booster Seat Attachment:**

**Booster Seat Attachment:**

Of course *Mother's 3<sup>rd</sup> Arm™* attaches to booster seats by going through the same processes as written above.

## Regular Car Seat Attachment:

### Regular Car Seat Attachment:

Mother's 3<sup>rd</sup> Arm can be easily attached to the arm of the car seat.

Simply turn the Clamp Screw counterclockwise until Clamp Mouth opens enough to fit the arm into it then tighten the Clamp Screw until clamp is firm.

**NOTE: When you are mounting on a surface as wide as car seat arm rest, as you tighten the Clamp Screw with your right or left hand, use your other hand index and thumb to squeeze the clamp down at the same time that you are tightening Clamp Screw down.**
